

WeSeSo Cyber Warrior comic book on WhatsApp security!!

Yes I have. Let me try. I spoke to her and she confirmed that she had not sent me any message.

I guessed that. The hacker had already hacked Sumi's WhatsApp account. And from there he got your number and he was trying to hack your WhatsApp account.

Scarry! But how?

You see, for hacking your WhatsApp account, he had to have the 6-Digit authentication code which came on your number as SMS. If he can get this code, he will be able to install your WhatsApp account on his mobile and see all info exchanged by you.

Oh My God! So you mean, he was using my friend's hacked WhatsApp account to make me believe that the request was from my friend?

Yes precisely. So, be careful. Just remember one thing - YOU DON'T HAVE TO TELL YOUR CODE TO ANYONE. Even if it looks real and urgent, ALWAYS verify. And also ensure that you have enabled 2-factor Authentication in your WhatsApp account.
